

Countdown Meter Series

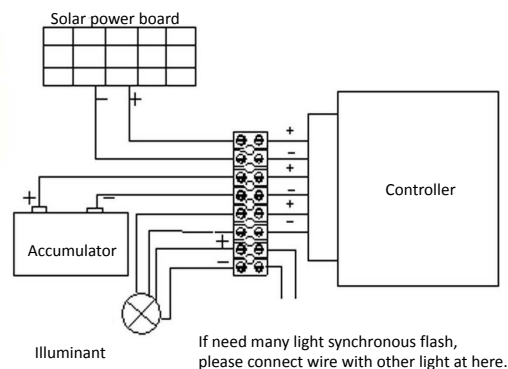

ø300mm/400mm Solar Warning Light Series

New GPS Synchronize

- The Light is powered by solar energy and thus more environmental-friendly
The control system for transforming light into electricity is extremely effective
The perfect storage battery can protect the circuit and effectively prolong the service life of the battery
- The voltage : DC-12V
- Specification of the battery : lithium battery 6600mAh/11V
- The 300mm light can work for a series of seven days and the 400mm light can work for a series five days
- Light source: Super bright yellow LED: 300mm-100pcs, 400mm-170pcs, light intensity of each one > 2cd
- Flashing rate 50±5 times/min
- Duty ratio: 1:10
- The average peak sunshine time: Average for 3 hours
- Viewing distance:>500m for 300mm, >800m for 400mm
- Service life of storage battery: about 2 years
- Service life of the solar panel: 15 years
- Net weight about 6.5kg (300mm), about 8kg (400mm)

Model:
SG300-3-15-2A

Solar Indicator Sign (Used in Diverging Road)

The sign is exquisitely made of aluminium alloy with excellent appearance and stable performance. The solar panel is integrated with the light body so as to facilitate transportation. With high brightness LED, the visual distance is quite long. Besides, the sign can achieve good warning effect with strong penetrability. Therefore, it is quite competitive among the same kind of product. The Sign is universally applied on highways, city road, road construction and so on effectively keep transportation order and reduce the rate of traffic accidents.
